

Compressed Gases and Transportation Emergencies Workshop

Sponsored by:

Indiana Alliance of Hazardous Materials Responders (IAHMR)

Indiana Propane Gas Association (IPGA)

Presented by:

Safe Transportation Training Specialists

IS THIS CLASS RIGHT FOR YOU??? If your department has the possibility of being called to a compressed gas emergency in a back yard, factory, on the highway or other mode of transportation, this workshop is where you need to be!

This is a powerful presentation that includes hands-on demonstrations, flaring devices, props and instruction that is designed to inform and inspire everyone from the front line fire fighter to the chief! This workshop exceeds the infatuation of a mere flaring demonstration and leaves the students with a sense of understanding of how compressed gases behave in and outside of their containers! Furthermore the class is supported by an array of transportation props, models and in many cases a full sized MC-331 training trailer the permits students to see the inside and outside of this common highway cargo tank.

This class is presented by Safe Transportation Training Specialists, a trusted provider of training services to the fire service and emergency response community since 1999.
